+91 8838210771 — [✉ chandermonish@gmail.com](mailto:chandermonish@gmail.com) — [in LinkedIn](#) — [GitHub](#)

## Profile Summary

---

Ambitious Python Developer skilled in designing and deploying backend applications, APIs, and database solutions. Proficient in Python, SQL, Flask, FastAPI, MySQL, and MongoDB, with additional experience in frontend integration using React, HTML, and CSS. Familiar with AWS cloud, Git, and Docker, with a strong grounding in data structures, OOP, and algorithms. Dedicated to building reliable, maintainable, and scalable software applications.

## Technical Skills

---

**Languages:** Python, SQL, JavaScript (basic for Frontend).  
**Databases:** MySQL, MongoDB.  
**Web Development & APIs:** Flask, FastAPI (Beginner), REST APIs.  
**Frontend (for integration):** HTML, CSS, React (Beginner).  
**Cloud & Development Tools:** AWS, VS Code, Git, GitHub, Docker (Beginner).  
**Core CS Fundamentals:** Data Structure, OOP, OS, Design Patterns (Beginner).  
**Testing and Debugging:** Pytest, Postman (for APIs), Logging.

## Certifications

---

**AWS CLOUD FOUNDATION** – [May, 2024]  
AWS Academy

**CCNA: Cisco Certified Network Associate** – [May, 2025]  
CISCO Academy

**Google: AI Essentials Specialization** – [August, 2025]  
Coursera

## Mini Projects

---

### Task Manager REST API Using Flask

- Developed a RESTful API for task management using Flask, supporting user registration, login (JWT auth), and CRUD operations on tasks.
- Integrated MongoDB for persistent task storage with user-based access control and deadline support.

### Automated WhatsApp News Delivery Bot using Python

- Developed a Python-based bot to deliver real-time, topic-specific news on WhatsApp using Twilio API and NewsData.io API.
- Integrated OpenAI-based summarization and hourly scheduling to enhance content quality and user experience.

## Main Project

---

### Low RCS (Radar Cross Section) Aerial Targets Detection using Neural Networks.

- Designed and trained a CNN model using **Python** with **TensorFlow/Keras**, incorporating **Conv2D**, **MaxPooling** and **Dense** layers to detect Low Radar Cross Section (L-RCS) aerial targets.
- Leveraged core **machine learning concepts** such as supervised learning and model evaluation to optimize detection performance.
- Utilized **MSTAR** and **simulated radar datasets** for training, validation, and testing, achieving reliable accuracy across dataset splits.

## Publications and Articles

---

- “Neural-Symbolic Fusion for Enhanced Radar Imaging and Low RCS Object Detection: A Hybrid Architecture Combining Deep Learning and Domain Constraints.” - Cited in International Research Journal of Modernization in Engineering Technology. – [May 2025]
